(a) Tight instances
approximation ratio OPT/|S|
maximum hyperedge size r
y = r (worst case)
greedy, adversarial order (k = 1)
greedy, adversarial order (k = 3)
greedy, random order (k = 1)
(b) Planted-hub instances (best of 8)
OPT_LP/|S|
number of planted hub edges q (r = 3)
random-order greedy
LP-weighted greedy
